DETAILED ACTION

Applicant's election with traverse of Group II, figure 1 (claims 15-16, and add new claims 21-32) in Paper No. 4 is acknowledged. The traversal is on the ground(s) that the search for groups I and II would be co-extensive. This is not found persuasive because the method claims (15-16) would be classified in different class than claims 1-14, and 17-20. However, claims 1-14, and 17-20 have been cancelled without prejudice. By rewiring the claims 15-16, and 21-32, examiner would like to have further restriction requirement as shown below:

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 15-16, drawn to a method of manufacturing a circuit board, classified in class 29, subclass 840.
 - II. Claims 21-32, drawn to a method of manufacturing a circuit board in which components are mounted, classified in class 29, subclass 832.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the

particulars of the subcombination as claimed because the combination does not require a step of arranging an anisotropic conductive film on a predetermined position of a substrate performed after a step of mounting a first component on the substrate by a solder connection. The subcombination has separate utility such as components can be mounted on a surface of the circuit board without selecting the band region on the surface of the circuit board so that might narrow down functions of the components mounted on the circuit board.

2. Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group I, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
